

BRANDON PITZEN

brandon@pitzen.dev
910.741.9071
Durham, NC

Front-end engineer and design systems specialist with 6+ years building and scaling the component libraries other engineers want to build on. I own front-end architecture end to end - component APIs, design tokens, accessibility, and performance - and lead the initiatives and mentoring that raise a team's bar.

Skills

- Design Systems
- Accessibility (WCAG)
- Responsive Design
- Performance Optimization
- Design Tokens & Theming
- Modern CSS Architecture
- Component API Design
- Storybook
- TypeScript / JavaScript
- React
- Next.js
- Vue
- Angular
- JSDoc
- Custom Web Components
- GraphQL
- Mentorship & Leadership

Technical Experience

Senior Front End Engineer - Healthie (10/2025 - 06/2026)

Owned front-end architecture and design systems for the web experiences that providers and patients touch every day, on a product serving millions of patients.

- Architected and built the design system - component APIs, composition patterns, design tokens, theming, and CSS architecture used across the product
- Shipped accessible (WCAG) and performant React and TypeScript components - optimizing bundle size and code splitting - backed by GraphQL and consumed by teams across the organization
- Designed and shipped custom AST-based lint rules (ast-grep) enforcing design-system component adoption, blocking legacy imports at PR time via CI and qilty
- Authored companion codemods to auto-migrate legacy usages, plus an audit script tracking adoption across 3,300+ imports
- Established front-end tooling and CI - Storybook for documentation, Chromatic for visual testing, type-safe component development, and automated lint/test checks in the pipeline
- Partnered with design to translate Figma into production components with a tight design-to-development handoff
- Led front-end initiatives, mentored engineers through code review and pair programming, and set best practices

UX Engineer - Jamf (05/2022 - 10/2025)

Built and scaled a cross-framework design system, owning the architecture and component APIs that let teams ship consistent, accessible interfaces faster.

- Built and scaled a thriving design system used across all Jamf products - component APIs, composition patterns, and a shared design-token, theming, and CSS architecture foundation
- Authored framework-agnostic custom Web Components consumed seamlessly across Angular, Vue, and React applications, with attention to performance and bundle size
- Led a full redesign of the flagship Jamf Pro product onto the modern design system, improving performance and accelerating development while delivering a more consistent, accessible experience
- Partnered with developers across product teams to streamline adoption and drove accessibility and usability improvements
- Wrote and maintained the design system documentation developers and designers rely on

Sr. Associate Software Engineer & Scrum Master - McKesson / Ontada (05/2020 - 05/2022)

Full-stack engineer increasingly specializing in front-end development and design systems, growing into a Scrum Leader role.

- Helped build a corporation-wide design system / component library with React, Chakra, and Storybook
- Led the front-end of a full rebrand of the flagship Clear Value Plus application
- Partnered with stakeholders to migrate the largest customer to the newest version of the product
- Conducted thorough GitHub code reviews and facilitated Scrum ceremonies for a team of 15

Earlier Experience

- **Technical Support Engineer - ArcESB (2019):** Implemented AS2/EDI solutions and built custom integrations for clients.
- **Software Developer - Sandro Tech Solutions (2018-19):** Led a full rebuild of a client's user authentication system.
- **Back-End Engineering Student - Momentum Learning (2018):** 12-week immersive Ruby on Rails program.
